a strong and fluent competency in mathematics is a necessary condition for scientific technological and economic progress however it is widely recognized that problem solving reasoning and thinking processes are critical areas in which students performance lags far behind what should be expected and desired mathematics is indeed an important subject but is also important to be able to use it in extra mathematical contexts thinking strictly in terms of mathematics or thinking in terms of its relations with the real world involve quite different processes and issues this book includes the revised papers presented at the nato arw information technology and mathematical problem solving research held in april 1991 in viana do castelo portugal which focused on the implications of computerized learning environments and cognitive psychology research

for these mathematical activities in recent years several committees professional associations and distinguished individuals throughout the world have put forward proposals to renew mathematics curricula all emphasizing the importance of problem solving in order to be successful these reforming intentions require a theory driven research base but mathematics problem solving may be considered a chaotic field in which progress has been quite slow
